

Appendix 2 — The Consultant's specification of the assistance (draft)

Proposed consultant

Asbjørn Rørvik, senior frontend/fullstack developer, Stavanger, Norway. 8+ years of production experience delivering complete digital products — frontend, backend, CI/CD and operations. B.Sc. in Automation and Electronics Design, University of Stavanger (2013–2016). CV attached.

Currently engaged by Dr. Dropin (Norwegian healthcare provider) to take a complete product from idea to production in two months, using AI-driven development practices — full ownership of architecture, frontend, backend and delivery. The product is under development and confidential; details can be shared in an interview to the extent the client permits. The engagement concludes 1 September 2026, so the consultant is fully available for the GeoWeb assignment from contract start (required no later than 1 October 2026).

Response to required skills and expertise (Appendix 1, §5.1.1)

Frontend development and architecture

8+ years building production frontends. Sole architect and developer of Supportify (Next.js/React/TypeScript SaaS serving 100+ paying Shopify stores) — architecture, state management, performance and operations end-to-end. React/Next.js is also the foundation of the product currently being delivered for Dr. Dropin. Frontend developer on two of Equinor's most business-critical offshore applications (React Native + TypeScript, via Bouvet) and on the NLR KSL app (React Native, via Netpower). Developer on the Kolumbus real-time public transport app, 142,000+ monthly active users, winner of the Nordic Public Transport Design Award 2025.

Modular design, specifically plugin interfaces

Supportify is built around an embeddable, plugin-style widget architecture that runs inside third-party Shopify storefronts with strict isolation of styling, state and network concerns, integrating chat, e-mail, Instagram and Messenger channels behind one plugin interface. Also author of ShapeltUp, an open-source CAD-scripting extension for VS Code designed as a pluggable tool surface for AI agents.

Web-based geospatial functionality (maps)

Hands-on OpenLayers experience from two products: the Kolumbus app (real-time transit map with live vehicle positions, route planning and contextual notifications for Rogaland's public

transport network) and Flagchase, a self-built digital orienteering product with OpenLayers-based course maps, checkpoints and live ranking.

Web-based charting and graphing functionality

Analytics and reporting views in Supportify (resolution rates, volume and channel statistics for 100+ stores).

Implementing automated tests

Automated test suites and CI-enforced quality gates in production projects: GitHub Actions and GitLab CI pipelines for web and mobile, including release automation against App Store/Play Store. Jest for unit/component testing in production pipelines; working knowledge of Cypress and Storybook.

Security awareness

Experience from environments with strict operational and security-related requirements: Equinor's offshore-critical applications (among the strictest code review, access control and release regimes in Norwegian industry) and EaseePay, a PCI DSS-compliant payment module (Adyen integration, encryption, data minimisation). Working habits include secrets management, dependency scanning, least-privilege access, mandatory code review and GDPR-conscious design. The consultant will comply with MET Norway's security instructions at all times.

Response to required technology familiarity

Technology	Experience
HTML, CSS3	8+ years, production
JavaScript / TypeScript	8+ years JS, TypeScript as primary language in current production work (Supportify, Dr. Dropin, Equinor apps)
React JS — Redux, Material UI	React/Next.js in production (Supportify, Dr. Dropin); React Native + TypeScript on Equinor's offshore apps and NLR KSL. Working familiarity with Redux and Material UI
Webpack / NPM and NX	Webpack/NPM: production. NX: familiar with the tooling, not yet used in production — expected to be quickly productive given extensive monorepo experience
Storybook, Jest, Cypress	Jest in production pipelines; working knowledge of Cypress and Storybook
OpenGeoWeb and OpenLayers	OpenLayers in production (Kolumbus, Flagchase). OpenGeoWeb: has studied the codebase — see below

Familiarity with the OpenGeoWeb codebase

To minimise onboarding time, the consultant has already studied the OpenGeoWeb monorepo (gitlab.com/opengeoweb): the NX workspace with the `geoweb` app and 27 publishable `@opengeoweb/*` libraries; the two-layer map abstraction where the framework-agnostic `webmap` core (`WMLayer`, `WMJSDimension`, `WMTime` and related `WMS/WMTS` classes) is bound to React in `webmap-react`, with OpenLayers isolated behind `OpenLayersMapView`; the plugin bridge in `libs/plugins` built on `@opengeoweb/plugin-interface` with typed scope events; and the Redux Toolkit store organised as domain slices (`map`, `layer`, `service`, `ui`, `syncGroups`). He is ready to contribute within this architecture from day one.

Response to required work experience

Multidisciplinary scrum team: 2021–2024 consultant at Bouvet (Equinor, Altibox, Easee) and 2024– at Netpower (Kolumbus, NLR, Aero Norway) — all delivered in cross-functional scrum teams with designers, testers, product owners and backend developers.

Collaboration in English: Fluent written and spoken English; English has been the working language in several previous engagements, including Equinor's international development environment.

International public-sector IT projects (meteorological context): Extensive Norwegian public-sector delivery experience (Kolumbus public transport — 142,000+ monthly users; NLR TryggDrift for agriculture). While the consultant has not worked in a meteorological organisation, he has delivered in comparable mixed operational environments (offshore-critical systems at Equinor used in daily operations) and has prepared for this assignment by studying the OpenGeoWeb codebase and domain.

Weekly reporting

The consultant will provide a weekly time-usage report to the Norwegian project manager, as required.
