

Letter of Tender — Frontend Developer for GeoWeb (case no. 2026/601)

To: The Norwegian Meteorological Institute (MET Norway)

From: Asbjørn Rørvik (sole proprietorship), org.nr 820 252 632, Stavanger, Norway

Date: 2 July 2026

The undersigned hereby submits a binding tender for the procurement "Frontend Developer for GeoWeb", ref. 2026/601, in accordance with the tender document and the attached SSA-B agreement with appendices.

Proposed consultant: Asbjørn Rørvik — senior frontend/fullstack developer with 8 years of production experience building and operating user-facing applications in TypeScript, React and Redux.

Why Asbjørn is a strong fit for the GeoWeb team:

- **Core stack match.** TypeScript and React in daily production work — React/Next.js as sole architect of Supportify, React Native + TypeScript on Equinor's business-critical offshore apps — with automated testing and modern CI/CD (GitLab and GitHub).
- **Geospatial and real-time UI experience.** Developer on the Kolumbus public transport app (winner of the Nordic Public Transport Design Award 2025, 142,000+ monthly users), with real-time map UI for positions, routes and stops; built OpenLayers-based course maps in own product Flagchase.
- **Security-aware delivery.** Developer on offshore-critical applications for Equinor and on EaseePay, a PCI DSS-compliant payment solution.
- **Proven speed with modern, AI-driven development.** Currently engaged by Dr. Dropin (Norwegian healthcare provider) to deliver a complete product from idea to production in two months as sole developer. The product is confidential while under development, but the engagement can be referenced.
- **Independent and remote-proven.** Sole builder and operator of Supportify, an AI customer-support SaaS used by 100+ Shopify stores — full ownership of frontend, backend, testing and operations.
- **Prepared for GeoWeb specifically.** Asbjørn has already studied the OpenGeoWeb monorepo — the NX workspace of `@opengeoweb/*` libraries, the `webmap / webmap-react` map abstraction around OpenLayers, the plugin bridge with typed scope events, and the Redux Toolkit domain slices — and can contribute from day one.

The consultant's current engagement concludes 1 September 2026, and he is therefore available full-time from the contract start — well within the required start-up no later than 1 October 2026. He works fluently in English in distributed, international scrum teams.

Hourly rate: NOK 1,075 excl. VAT. No travel costs are included; any travel will be agreed in advance and invoiced per government rates, cf. Appendix 5.

This tender is valid until 10 October 2026, 12:00 CET.

Sincerely,

Asbjørn Rørvik
