

Reference Assignments — Asbjørn Rørvik (org.nr 820 252 632)

Qualification requirement 4.3: relevant assignments within the past 3 years. Contact details and assignment values are provided on request, cf. the ESPD self-declaration; full documentation will be presented prior to contract award in line with section 3.1 of the tender document.

1. Supportify — AI customer support for Shopify (2025 – ongoing, solo)

Role: CTO and sole developer — architecture, frontend, backend, operations. AI-based customer-support platform: one unified inbox (chat, e-mail, Instagram, Messenger) with an AI agent resolving up to 85 % of inquiries automatically. 100+ paying stores in production. React/Next.js/TypeScript, plugin/embed architecture, automated testing — proof that a single consultant can carry a full production delivery over time.

2. Kolumbus — real-time public transport app (2024–2025, team via Netpower)

Role: Developer in cross-functional scrum team. Travel app with 142,000+ monthly active users: route planning, real-time vehicle map (OpenLayers), contextual notifications and pay-as-you-go payment. Winner of the Nordic Public Transport Design Award 2025. Public-sector client, high-traffic production system with real-time geospatial data.

3. Dr. Dropin — complete product, idea to production (2026, solo)

Role: Sole developer delivering a complete product from idea to production in two months for the Norwegian healthcare provider Dr. Dropin, using an AI-driven development workflow — full ownership of architecture, frontend, backend and delivery. The product is confidential while under development; scope and outcome can be elaborated in an interview to the extent the client permits. Engagement concludes 1 September 2026.
